

TACTICAL FIRST AID KITS (TFAKs)

The ATHENA Tactical First Aid Kits (TFAKs) are designed to outfit a tactical team with the essential medical equipment needed to respond to traumas. The system includes two sizing options; the TFAK-Compact and the TFAK-Enhanced. The different kits are designed to reduce what each operator needs to carry to be effective in an emergency. The TFAK-Compact is equipped with the lifesaving essentials, and is designed to be carried by each team member. This kit features a red quick pull tab and open view of the contents to save necessary seconds finding the equipment. The TFAK-Enhanced is intended for one team member to carry to offer additional support during tactical traumas and first aid incidents.

TFAK-COMPACT

AARD-10121
